

Makalu base camp trek - 22 Days

The Mount Makalu is the **fifth highest mountain in the world**, with an elevation of 8481 meters and located in the Mahalangur Himalayas in the border region between **Nepal and Tibet** (China). It is known for isolated peak which is shaped like four-sided pyramid and is part of the eight-thousanders, a group of 14 mountains on Earth that exceed 8000 meters in height. Makalu was first summited by Lionel Terray and Jean Couzy of a French expedition on May 15, 1955, led by Jean Franco. The trek takes you through some of the most remote and pristine areas of Nepal, offering stunning views of the Himalayas, unique flora and fauna, and a chance to experience the local culture of the region.

The main highlight of this trek is reaching the **base camp** of Mount Makalu which stands at an elevation of 5100 meters above sea level. Reaching base camp is a significant **achievement and a rewarding** experience that offers you incredible views of the **Barun Glacier**, the south face of Makalu (8481 m) and a complete alluring panorama of **Everest (8848 m) and Lhotse (8516 m)** is visible. Similarly, you will also encounter lush forests, pristine rivers, and alpine meadows along the way.

As you trek through the **Makalu Barun National Park**, you will have opportunity to witness its incredible biodiversity. It encompasses a wide range of altitudes, from the lowland subtropical forests to the high alpine meadows and covers a vast area of 1500 square kilometers. The park is home to a rich variety of flora and fauna, includes around 3000 species of flowering plants, 75 species of mammals, and 440 species of birds. It's a paradise for birdwatchers and wildlife enthusiasts. Spiny Babbler is one of the rare birds, found in Nepal only. You can also spot other wildlife such as elusive snow Leopard, red panda, Himalayan black bear, Himalayan tahr, and clouded leopard during your trek.

The trekking trail is relatively remote and less crowded region of Nepal, offering a sense of exploration and adventure as you traverse remote and pristine landscapes. This trek gives you a sense of more solitude and tranquility trekking experience compared to other popular destinations like the **Everest and Annapurna region**. You will have the opportunity to immerse yourself in the serene natural surroundings. Additionally, it is also considered to be challenging **trekking route**. The trek takes you through a variety of terrain, including dense forests, steep ascents and descents, rocky paths, and glacial moraines. And also allows you to interact with the local Sherpa and Rai people and gaining insight into their unique cultures, traditions, way of life, and their warm hospitality as you pass through the village along the route. This diversity keeps the trek interesting and engaging that many trekkers seek in the **Himalayas**.

Overall, the **Makalu base camp trek** is an extraordinary journey for trekkers and mountaineers who want to experience adventure, natural beauty, and a deeper understanding of the Himalayan region. However, it's essential to have prior trekking and high-altitude hiking experience to undertake this **challenging trek** as it involves steep ascents and descents, rocky and rugged trails, and river crossings. Experience with similar terrain will help you navigate these challenges more comfortably.
